Green light at Thermore

From Iris Schlomski

Thermore shows the next big step towards sustainability with Thermore Ecodown and Thermore Thermosoft at Performance Days, 16.-17. November 2016, Munich

Thermore shows the next big step towards sustainability at Performance Days (Photo: Performance Days)

Thermore Ecodown

The new Ecodown is the only synthetic product in the market to be made from 100% postconsumer plastic bottles. This allows the reuse of a considerable number of bottles, which would have otherwise ended their useful life as waste in a landfill.

Depending on the application, outerwear insulated with Ecodown can save up to 10 bottles per garment. Also, using PET bottles instead of oil will help protect energy

Thermore Thermosoft

Thermore Thermosoft is now made 50% of recycled polyester. Thermosoft has the best value in a branded insulation product for today's performance outerwear.

What's equally impressive is that the new recycled thermal insulations and all other sustainable products by Thermore do not require special quilting restrictions or fabrics- and can be washed and/ or dry cleaned with confidence. This high level of durability equates to exceptional, long term warmth over the life of a garment.

A wide variety of weights and thickness options cater perfectly to every possible design requirement.

At Performance Days an updated version of the Ispo Award winning Thermore Stretch is also going to be presented: high stretchability now at a competitive price!
